

DE-PALLETIZER

Sometimes it has to be complex, to make it easy on you. The de-palletizer is such a machine which has all our knowledge. It is suitable for various pallet sizes and does not only unpack quick and safe, but also removes layers automatically. Thus, put the pallet into the machine and it does the rest.

OUTPUT OVERVIEW

- PLC-controlled systems with touch panel for control and visualisation
- Rigid steel construction, painted upon customer's request
- Positioner axes driven by servo motors for a high accuracy
- Automatic monitoring of all important functions and high process reliability
- Suitable for Euro-pallets, industrial pallets or other customised types
- The program sequence can be easily traced, and the user can visualise the flow and alter the flow, if necessary
- Low-maintenance and easy access
- Integration of automatic underliner removal possible
- Automatic supply of empty pallets to a pallet magazine
- Height control for cans and program selection via bar code reader
