

# TRANSFER UNITS

It is better to be safe than sorry. Accordingly, our transfer unit handles bottles and containers with care - even if they are „only“ made of plastic material. The transfer unit inserts bottles or containers into transport pucks and orients them fast and reliably, so the container front side always leads. Or would you prefer to make the bottom the top? No problem, our transfer unit turns bottles or containers upside down.

## OUTPUT OVERVIEW

- Capacity up to 800 bottles per minute
- A large variety of articles (5 mL to 6,000 mL)
- Careful handling of the bottles
- Simple refitting to other bottle sizes
- Changing the format parts without tools
- Discharging the articles with bottleneck pointing up or down
- Bottle discharge either inside a puck or freestanding
- Existing conveyor belt systems / integratable puck systems
- Low noise level
- Different puck types can be used
